

Health Intelligence Quarterly Report

*Cervical Screening:
5-Year Coverage of Women Aged 25-64
Quarter 4 (January – March) 2013/14
June 2014*

Prepared by Emily Silcock, Public Health Information Officer

The **Kent and Medway Public Health Observatory (KMPHO)**
established 1st April 2008.

Vision

The Kent and Medway Public Health Observatory which is hosted by Kent County Council exists to influence and inform action to improve health, reduce inequality and enhance well-being for people living and working in the Kent and Medway health economy. We do this by providing impartial and robust health intelligence and insight.

Mission

To deliver clear and unambiguous public health intelligence and insight to inform and prioritise public health action and strategic direction

To utilise disparate health and health related data sources to provide a comprehensive assessment of the public health profile of communities across Kent and Medway

To support individuals, teams and organisations across Kent and Medway to improve health reduce inequality

Values

- A commitment to improving health and well-being and to reduce health inequalities
- To work collaboratively within Kent County Council and with our partners across the the health economy
- To act with integrity and strive for excellence in analytic rigor
- To provide a responsive and innovative intelligence service that adds value, insight and direction to public health action

Interim Kent Director of Public Health: Andrew Scott-Clark
Head of Health Intelligence: Gerrard Abi-Aad

Background

The NHS cervical screening programme was established by the Department of Health in 1988. In 2012-2013 3.32 million women aged 25-64 were screened nationally according to the Health and Social Care Information Centre. Using a call and recall system, where women are invited to attend for a screen. The screening programme aims to reduce the number of women who develop invasive cancer, and to reduce the number of women who die from it.

The screening programme is designed to detect and treat early abnormalities which left untreated may develop into cancer of the cervix. Early detection and treatment can prevent 75% of cancers developing.

The screening programme targets those at risk from developing cervical cancer and is eligible to women aged 25 to 64 years. The target five-year coverage rate is 80%.

Screening Programme in Kent and Medway

The majority of cervical screening tests are undertaken in general practice. A minority of women may choose to have a private test. The call recall programme in Kent is co-ordinated by the Primary Care Information System (PCIS) and runs on a 5 year cycle.

Presenting the Data

Cervical screening coverage statistics are produced quarterly by the Primary Care Information system. Coverage rates are calculated as:-

$$\left[\frac{\text{Number of women screened aged 25-64}}{\text{Number of eligible women aged 25-64}} \right] \times 100$$

This is a different methodology than that used to calculate coverage rates for QOF, in which certain exclusion criteria may be applied to the denominator population.

Note:

Although the coverage statistics are produced quarterly, coverage rates represent the number of women screened within the last 5 years up to and including the quarter end date.

Coverage rates are calculated at practice level. These are then aggregated to Clinical Commissioning Group (CCG) totals, Kent County total and national level in order to provide various points of comparison. This report presents a summary view at levels of CCG and above. Individual practice level data by CCG are provided.

Coverage rates for the two latest quarters are shown to illustrate change over time. Coverage rates that are colour coded green highlight screening performance at or above the target rate (80%), whereas pink indicates performance that falls below the target rate.

Note:

The quarter ending 31st March each year may also be referred to as the 'annual' rate.
