

# West Kent

## Health and Care Partnership profile

Created by Medway Council Public Health Intelligence Team and  
Kent Public Health Observatory

## Summary part 1: West Kent

Indicator	Compared to England
Life expectancy at birth (Male)	Better
Life expectancy at birth (Female)	Better
Smoking Prevalence in adults (18+) - current smokers (APS)	Better
Percentage of adults (aged 18+) classified as overweight or obese	Better
Children with excess weight Year 6, three year average	Better
Percentage of physically inactive adults	Better
Admission episodes for alcohol-specific conditions	Better
Air pollution: fine particulate matter (historic indicator)	Not compared
Total number of prescribed antibiotic items per STAR-PU	Higher
Breast cancer screening coverage (females aged 50-70)	Better
Cervical cancer screening coverage (females aged 25-49)	Better
Bowel cancer screening coverage (persons aged 60-74)	Better
Infant mortality rate	Better
Low birth weight of term babies	Better
Stillbirth rate	Similar
Smoking status at time of delivery	Worse
AE attendances (0-4 years)	Worse
Percentage of 5 year olds with experience of visually obvious dental decay	Better

## Summary part 2: West Kent

Indicator	Compared to England
Under 18s conception rate / 1,000	Similar
Emergency hospital admissions for asthma (< 19 yrs)	Better
Emergency hospital admissions for epilepsy (< 19 yrs)	Better
Emergency hospital admissions for diabetes (< 19 yrs)	Similar
Hospital admissions for mental health conditions (0-17 years)	Better
Hospital admissions as a result of self-harm (10-24 years)	Worse
Hospital admissions due to substance misuse (15-24 years)	Similar
Hypertension: QOF prevalence (all ages)	Lower
Diabetes: QOF prevalence (17+)	Lower
CHD: QOF prevalence (all ages)	Lower
CKD: QOF prevalence (18+)	Higher
Stroke: QOF prevalence (all ages)	Similar
Deaths from circulatory disease, under 75 years	Better
Deaths from all cancer, under 75 years	Better
Cancer diagnosed at early stage (experimental statistics)	Not compared
Unplanned hospitalisation for chronic ACSC	Better
Depression: Recorded prevalence (aged 18+)	Higher
Serious Mental Illness: QOF prevalence (all ages)	Lower

## Summary part 3: West Kent

Indicator	Compared to England
Suicide rate (Persons)	Similar
Suicide rate (Male)	Similar
Estimated dementia diagnosis rate (aged 65 and over)	Not compared
Emergency hospital admissions due to falls (persons aged 65 and over)	Worse
Emergency hospital admissions for hip fracture (persons aged 65 and over)	Similar
Osteoporosis: QOF prevalence (50+)	Higher

## Contact details

## Purpose

- Profiles have been created for each of the Health and Care Partnerships (HCPs) in the Kent and Medway Integrated Care System (ICS).
- 1) Dartford, Gravesham and Swanley; 2) East Kent; 3) Medway and Swale; 4) West Kent.
- The aim of the profiles is to allow comparison between each of the HCPs and identify priority areas to focus work.

# Kent and Medway HCPs

## Health and Care Partnerships

-  Dartford, Gravesham and Swanley HCP
-  East Kent HCP
-  Medway and Swale HCP
-  West Kent HCP

Contains National Statistics data © Crown copyright and database right 2019  
Contains OS data © Crown copyright and database right 2019  
Produced by Medway Public Health Intelligence Team, Medway Council 2022-05-24

## Rationale

- The profiles contain five sections, which are based on key themes identified in the NHS Long Term Plan.
- 1) Demographics; 2) Prevention and Health Inequalities; 3) Best Start in Life; 4) Major Health Conditions; 5) Ageing Well.
- Key stakeholders were consulted to identify the indicators that should be included.
- Due to limitations in the available data, some indicators could not be included for all the priorities identified at this time.

## PCN hex map explained

- Some slides contain a hex map, which displays the indicator value at PCN level.
- Each hexagon represents a PCN, arranged according to its relative geography within the HCP.

## Number grid explained

- Some slides contain a number grid, which displays the indicator value at different levels of geography.
- England, Kent and Medway ICS, HCP, and small area.
- The small area type displayed depends on the data available for the indicator.
- Either District & Unitary Authority (UA) or Clinical Commissioning Group (CCG).

HCP value	England value
	ICS value
Small area values	Time period

## Small areas

- District & UA and former CCG data have been mapped to the HCP boundaries as per the table below.
- Caveat: District & UA data does not align with the HCP areas exactly.
- For the purpose of this profile, data for whole District & UAs have been assigned to the HCP where the majority of residents reside.

<b>Health and Care Partnership</b>	<b>District &amp; Unitary Authority</b>	<b>Former Clinical Commissioning Group</b>
Dartford, Gravesham and Swanley	Dartford; Gravesham	Dartford, Gravesham and Swanley CCG
East Kent	Ashford; Canterbury; Dover; Folkestone and Hythe; Thanet	Ashford CCG; Canterbury and Coastal CCG; South Kent Coast CCG; Thanet CCG
Medway and Swale	Medway; Swale	Medway CCG; Swale CCG
West Kent	Maidstone; Sevenoaks; Tonbridge and Malling; Tunbridge Wells	West Kent CCG

## Small areas continued

- Data at several small area levels has been used as building blocks to calculate the PCN values: Lower Super Output Area (LSOA), ward, general practice and school.
- LSOAs have a defined geographical boundary. On average the population is about 1,700 people so they can be thought of as representing a neighbourhood. There are 1,065 LSOAs within Kent and Medway.
- LSOAs and wards were assigned to PCNs on a first passed the post basis, e.g. LSOAs or wards were mapped to PCNs based on which PCN has the highest count of registered patients living in that LSOA/ward.
- School level data was assigned to PCNs based on the ward the school was located in. Only primary and nursery school data was used as this more likely reflects the child profile of the local area due to the larger catchment areas of secondary schools.

## HCP value and comparison

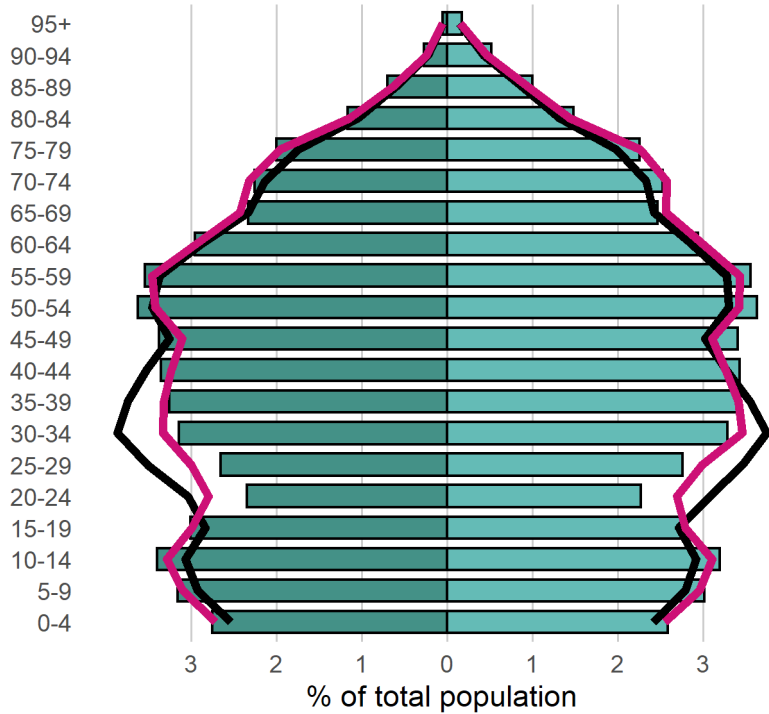

- The HCP values have been calculated from either LSOA, ward, general practice, school, District & UA or CCG level data using one of two methods:
- 1) Aggregated data: HCP values are created from aggregated counts and denominators, where data is available.
- 2) Small areas averaged: Where count and/or denominator data is not available, the HCP value is the median of the small area values.
- A RAG rating (red, amber, green) has been applied to the majority of indicators to show how well an area is performing compared to a benchmark (England). The RAG rating is assigned by comparing an area's value to a reference range, which was created using either confidence intervals (CIs) or a range around the England average (usually 5%). Green corresponds to a value that is better than England, red to a value that is worse, and amber indicates that there is no difference.
- Where it is inappropriate to label high or low values as 'better' or 'worse', for example osteoporosis prevalence, the terms 'higher' and 'lower' have been used with neutral colouring: shades of blue from light to dark. Such labelling does not imply that high values of these indicators, for example, are 'worse'.
- An indicator is shaded grey where it is inappropriate to apply a RAG rating due to the methods used in the calculation or the count is less than 10.

# DEMOGRAPHICS

# Population

## Age Profile for West Kent

Total population: 518,933

Male       Kent & Medway  
 Female       England

# PREVENTION AND HEALTH INEQUALITIES

# Life expectancy at birth (Male)

PCNs in West Kent. Compared to England:  
■ Better ■ Similar ■ Worse ■ Not compared

Trend data not available.

The rate in West Kent is better than England.

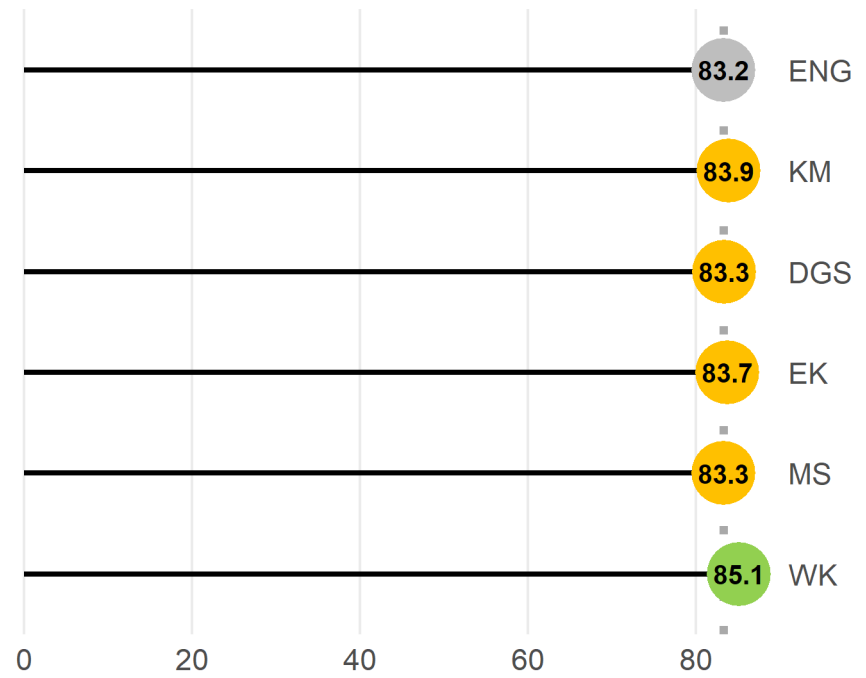

Value type: Years.  
Latest time period: 2015 - 19.  
Source: PHE, Fingertips, Indicator ID: 93283.  
Value calculation: Small areas averaged.  
Small area type: Ward to PCN.  
RAG method: England plus/minus 2%.

# Life expectancy at birth (Female)

PCNs in West Kent. Compared to England:  
■ Better ■ Similar ■ Worse ■ Not compared

Trend data not available.

The rate in West Kent is better than England.

Value type: Years.  
Latest time period: 2015 - 19.  
Source: PHE, Fingertips, Indicator ID: 93283.  
Value calculation: Small areas averaged.  
Small area type: Ward to PCN.  
RAG method: England plus/minus 2%.

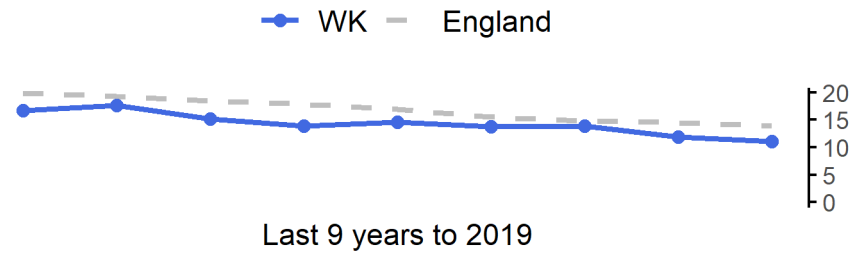

# Smoking Prevalence in adults (18+) - current smokers (APS)

11		14
		England
HCP: West Kent		14
Kent and Medway		2019
9	8	
Tonbridge and Malling	Tunbridge Wells	
14	12	
Maidstone	Sevenoaks	

The rate in West Kent is better than England.

Value type: Proportion - %.  
 Latest time period: 2019.  
 Source: PHE, Fingertips, Indicator ID: 92443.  
 Value calculation: Small areas averaged.  
 Small area type: Districts & UAs (from Apr 2021).  
 RAG method: England plus/minus 5%.

There are data quality concerns with the figure for Dartford LA (see notes on the next slide).

## Smoking Prevalence in adults (18+) - Notes

- Smoking prevalence is an estimate based on a sample of the population questioned in the Annual Population Survey run by the Office for National Statistics.
- The figure for Dartford LA in 2019 was high (26.4%) but with a very wide degree of uncertainty.
- This is most likely due to a small sample of people.
- Therefore the aggregate figure for DGS HCP should be interpreted with caution.

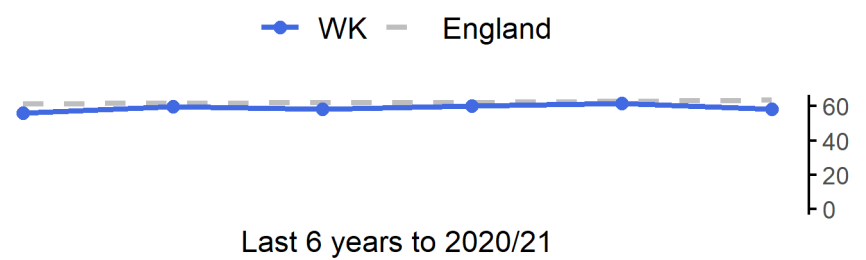

# Percentage of adults (aged 18+) classified as overweight or obese

58		63
		England
HCP: West Kent		64
Kent and Medway		2020/21
